Accessories are an important tool in lighting designers' palettes which allows them to fine tune lighting scenes by creating dedicated light distributions and colors. They also give designers the flexibility to optimize a design on site, with any lamp beam spread. Examples of typical accessories include: hex-louvers and snoots to reduce glare; grates to create linear light patterns; and gels for tinted effects.

Because of their high operating temperature, halogen lamps require accessories made of heavy glass or metal and bulky attachment mechanisms: this limits fixture choices and aesthetic possibilities. Many LED directional lamps are incompatible with accessories because they use multiple LED sources - "shower heads", have non-standard dimensions, or have operating temperature requirements significantly lower than halogen sources.

The Soraa Snap System is the first LED lamp/accessory solution that is optimized to work as an integrated system. Based on high brightness single source GaN on GaN™ LED technology, it completely redefines accessory application. The effects that can be achieved are similar to what can be done with halogen sources, but are enabled by a relatively low operating temperature and groundbreaking optical design, materials, and methods of attachment. The system's self-centering magnetic interconnect system makes using accessories completely user friendly, and opens up possibilities for accessories to a much wider range of fixtures than ever before. Also, the relatively low temperature of the Soraa MR16 Snap System lamps mean that new accessory materials, such as advanced polymer films, can be used for beam and color control in ways never before possible.

BEAM SPREADER SNAP

Use in any application where reducing the number of beam angle SKUs is required. Reduces inventory costs. Shortens specification, design, sales cycles. Provides maximum flexibility up to the time of installation.

Stacking of accessories

Snap accessories can be stacked in combination. For example, a beam spreader can be used in combination with CCT shifter. When combining beam shaping Snap accessories with CCT shifting Snap Accessories, for best results always place CCT shifting Snap on lamp first, below beam shapers, as shown in diagram at right.
